Embedding of a **PDF** is straight forward and simple:
1. Open Director
2. From the Insert Menu select Media Element and then select PDF document

Notice that this created a new cast member in your internal cast.

3. Double click the newly created PDF cast member, this opens the properties for the PDF. [fig2.bmp]
4. Click the browse button and locate a PDF document to embed into our project. (If you can't find an available PDF document the manual that came with the PDFXtra makes a nice sample.)
5. Press OK to close the PDF properties.
6. Drag the PDF cast member to the stage
7. Play the Director Movie
